RESEARCH INTERESTS	My research lies at the intersection of <b>natural language processing</b> (NLP) and <b>computational social science</b> (CSS). The primary goal is to <b>make computers understand and facilitate better communication</b> between people. My latest work centers on <b>explaining, predicting, and preventing</b> incivility in user-generated content. Specifically, I enhance the robustness of NLP systems in identifying <b>hate speech and counter speech</b> . Additionally, I develop reliable frameworks to <b>measure and forecast the incivility of conversations</b> , as well as bridge the gap between computer science and computational social science to facilitate the use of cutting-edge AI models in other disciplines, including communication and social science.
