RESEARCH INTERESTS	My research lies at the intersection of natural language processing (NLP) and computational social science (CSS). The primary goal is to make computers understand and facilitate better communication between people. My latest work centers on explaining, predicting, and preventing incivility in user-generated content. Specifically, I enhance the robustness of NLP systems in identifying hate speech and counter speech . Additionally, I develop reliable frameworks to measure and forecast the incivility of conversations , as well as bridge the gap between computer science and computational social science to facilitate the use of cutting-edge AI models in other disciplines, including communication and social science.
